GTF Complex

Multi Nutrient Formula with Chromium & Adrenal Concentrate

Glucose Tolerance Factor (GTF) functions in the body to facilitate the cellular actions of insulin and supports efficient cellular uptake of glucose for energy. GTF is a complex molecule that requires numerous vitamins and minerals to support energy production. The addition of tissue concentrates facilitates the action of GTF. GTF Complex was formulated by well known naturopath Martin Budd, N.D.

Features:

The B vitamins are involved in all aspects of energy production and glucose metabolism.

Vitamin E provides antioxidant support, especially for cell and organelle membranes - healthy membranes support optimal binding and action of GTF and insulin in cells.

Chromium is part of the glucose tolerance factor (GTF), which supports the action of insulin at the cellular level. A deficiency of chromium reduces GTF action.

Zinc also helps support pyruvate levels for energy production.

Recommendation: 1-2 capsules three times daily, or as directed.

Caution: Not recommended during pregnancy or whilst breastfeeding.
Not recommended for children under 12 years of age unless directed by a health care professional.
