

Product Information Sheet

Liver Support

N-Acetyl-L-Cysteine

V Ve

Single Nutrient Formula

N-Acetyl-L-Cysteine is a powerful antioxidant which has also been shown to increase glutathione levels. Glutathione synthesis in the liver has an important function in metabolic clearing.

Ingredients:

Each capsule typically contains:

N-Acetyl-L-Cysteine (NAC) 500 mg

Encapsulated with:

Ascorbyl Palmitate
Microcrystalline Cellulose
Vcaps™* (Hypromellose-HPMC & water)

Features:

NAC is highly absorbable and supplies the body with bioavailable L-cysteine, the limiting amino acid in new glutathione synthesis.

Glutathione is both an antioxidant and a chelator of toxins, important for metabolic clearing.

NAC is highly absorbable and stable to oxidation, which makes it an excellent way of increasing the body's stores of reduced glutathione.

Recommendation: 1 capsule three times daily, after meals, or as directed.

Caution: If taking medication, seek the advice of a medical practitioner.

Contains ingredients derived from:

Soy

Product Code: 3225

Package Size: 90
