Joint and Muscle Support

Glucosamine Sulphate

Naturally Derived

Glucosamine is an important building block needed by the body to manufacture specialised molecules called glycosaminoglycans, found in cartilage and other structural connective tissue. Unlike some glucosamine preparations, glucosamine sulphate is uncontaminated and derived from natural marine sources, with a minimum purity of over 98.9%.

Ingredients:

Each capsule typically contains:

Glucosamine Sulphate (potassium salt) (providing 295mg elemental glucosamine)	500 mg*
--	---------

* Derived from natural marine sources. Minimum purity over 98.9%.

Encapsulated with:

Gelatin
Microcrystalline cellulose

Features:

Glucosamine sulphate is quickly absorbed and the glucosamine may be used by the body as a building block for synthesis of glycosaminoglycans, a critical component of cartilage.

Glucosamine is rich in sulphur-containing amino acids, critical for connective tissue cross-linking and strength.

This glucosamine sulphate product is made using potassium salt, which means it can be given safely to those on a sodium-restricted diet.

Recommendation: 1 capsule three times daily with food, or as directed.

Caution: Not recommended for individuals with shellfish allergy.

Contains ingredients derived from:

Crustaceans
